

DFO LABORATORY DUST AND LEAD EXTRACTION SYSTEMS

MARC has selected the high performance Downflo Oval (DFO) family of dust collectors as the most appropriate units for use in mineral assay laboratories. We have successfully incorporated units in both sample preparation and fire assay areas.

The DFO provides up to 25% more airflow than previous designed cartridges that allows more airflow through the collector without increasing the size of the footprint or damaging filters.

Models available range from DFO2-4 (2,000 cfm) to DFO4-128 (64,000 cfm) Unit as shown is a DFO4-16 (8000 cfm)
